

## A Message From Dr. Samuel Taller

Many people who have lost teeth realize how hard it is to duplicate the function and appearance of your own natural ones. However, today's implants can restore your mouth with a secure and very natural looking restoration. Implants have been in use for over 20 years and are often the first choice of treatment. They can replace any number of teeth and can be adapted for your own situation.

Each implant has 3 basic components: the **implant root**, the **implant abutment post**, and the **crown**. The **implant root** is embedded in the bone and the **implant abutment post** and **crown** is attached to the **implant root**.

A thorough examination must be done to determine if implants are the right choice for you. Please contact us if you have any questions.

**We appreciate your confidence in  
referring your friends.**

**We use Digital X-rays with 75% less radiation.**

## Stay Healthy!

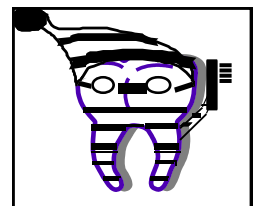

Regular recall visits are important to keep your teeth and gums healthy. White or dark spots on teeth, sensitivity and pain on eating are common symptoms of decay. However, small cavities may not have any symptoms. Bleeding gums and loose teeth are symptoms of periodontal disease but many people are unaware that a simple cleaning and check up is an essential part of keeping healthy.

Fluoride treatment is not just for kids. Many adults suffer from sensitivity to hot or cold. They also have old, worn and chipped fillings as well as exposed areas of the tooth near the gum line which can decay. The fluoride gel typically takes only five minutes during your cleaning visit and can reduce your risk of decay and sensitivity.

## USE IT OR LOSE IT!

For those who have insurance, or "Flex" money, now is the time to take care of your dental treatment. This year's dental benefits may expire at year's end.

*Always update your medical history. Any changes in medication, recent history of illness, etc. can affect your dental treatment.*
